

JHENKAR M S

+91 8105962299 hello.jhenkarms@gmail.com linkedin Github Bangalore, Karnataka

Summary

Java and Spring Boot developer with hands-on experience building full-stack applications using React.js and MySQL. Comfortable across the full stack, from REST API design to relational database modeling. Looking to grow in a product-focused environment where I can contribute to real engineering challenges.

Education

CMR Institute of Technology

2021 – 2025

Bachelor of Engineering in Information Science and Engineering - 7.89 CGPA

Bangalore, Karnataka

Technical Skills

Languages: Java (Primary), Python (Familiar)

Frameworks: Spring, Spring Boot, Spring MVC, Spring Data JPA, JDBC, Django

Web Technologies: HTML, CSS, JavaScript, React.js, REST API design

Databases: MySQL, PostgreSQL

Tools: Git, GitHub, , Agile

Core CS: Data Structures and Algorithms, OOP, Operating Systems, DBMS, Secure Coding Practices

Projects

Job Application Tracker | *Spring Boot, React.js, MySQL, Spring AI*

GitHub | May 2026

- Developed a full-stack job application tracking platform enabling users to manage 100+ job applications with real-time status tracking.
- Integrated 5+ RESTful APIs using Spring Boot for authentication, job management, and dashboard analytics.
- Added 6 core features - application status tracking, interview scheduling, searching, filtering, sorting, and pagination - reducing manual application-tracking effort for users.
- Designed a responsive React.js frontend with 10+ reusable components, Axios-based API integration across 5+ endpoints, and centralized state management.

BrewCafe | *Spring Boot, React.js, MySQL*

GitHub | March 2026

- Developed a full-stack cafe management application serving 2 user roles (Admin and Customer), streamlining menu management, order processing, and user administration.
- Built and integrated 15+ RESTful APIs using Spring Boot for menu, orders, authentication, and user management functionalities.
- Designed and implemented a relational database schema with 8+ normalized tables using MySQL and JPA, reducing data redundancy and improving maintainability.
- Integrated JWT-based authentication and Spring Security across 5+ protected endpoints, preventing unauthorized access to user data.
- Built a responsive React.js dashboard with 20+ interactive UI components, improving operational efficiency across customer and staff modules.
- Structured the application using Controller-Service-Repository architecture, improving code modularity and reducing development effort for feature additions.

Internships

ANZ Bank

July 2025 - December 2025

Apprentice

Bangalore, Karnataka

- Analyzed 10+ structured datasets containing payment service inventories, migration timelines, and ownership mapping to support a cloud migration initiative.
- Created interactive dashboards using Qlik Sense to track migration progress across 10+ services, extracting insights that supported requirements analysis and workload prioritization.

Training

Pentagon Space

December 2025 - present

Java Full Stack Trainee

Bangalore, Karnataka

- Completed hands-on training in Core Java, SQL, JDBC, and Spring Boot, applying agile software development practices and industry best practices.
- Built real-world full-stack applications end-to-end, gaining practical exposure to REST API design, unit testing and frontend integration.

Certificates

Java Full Stack - TalentNext by Wipro, Java programming for Beginners- Udemy
